WHAT IS DODO?

The dodo (*Raphus cucullatus*) is an extinct flightless bird that was endemic to the island of Mauritius, which is east of Madagascar in the Indian Ocean. The dodo's closest relative was the also-extinct and flightless Rodrigues solitaire. The two formed the subfamily Raphinae, a clade of extinct flightless birds that were a part of the family which includes pigeons and doves. The closest living relative of the dodo is the Nicobar pigeon.

DODO ON BASE

Dodo is a new narrative on Base aiming to replace boring cat and dog coins.

Dodo evolved from a v1 token called \$DODO and united a few CTOs to re-create the narrative without airdrops – 100% supply added to LP and old holders compensated with a \$DODO bag the CTOs bought themselves..

DODO UTILITY & NFTS

Dodo aims to become an example to all community takeovers.

The DODO NFTs will evolve in a children educational comic-book.

Dodo NFT holders will have special voting rights in our DAO.

DODO DAO

On chain DAO and multi-signature community wallet is in the cooks, which will give \$DODO holders voting rights based on the amount of tokens they hold.

This will make \$DODO more decentralized, and holders will be able to decide what step the community takes next, make a proposal, and how to spend community marketing wallet funds.
